Applying Premier Over Sealed Wood

Water or water-borne products cannot be applied directly to raw wood... Therefore, a wood surface must have a solvent-based sealer or finish on it if **Premier** is to be applied.

1. Sweep or vacuum floor.
2. Mix **Fast-1-2-3** at a ratio of ½ ounce per gallon of cold water.
   Wash surface well and rinse with fresh water.
3. Allow surface to dry for at least 20 minutes.
4. Apply first coat of **Premier** and let dry for at least one hour.
5. Check floor for severe roughness before applying second and last coat.
   If there are rough spots, buff floor out with standard floor machine and clean red or white pad. Pass oil-free dust mop over floor before next step.
6. Apply second coat of **Premier** and wait 30 minutes before opening to traffic.
